First Previous 1 Next Last							
Back						Add a templa	ate

They are in ODT format, editable with LibreOffice or OpenOffice (except for the QR code templates).

This document does not explain how to paginate a document, but how to make certain parts of a document variable so that LabBook can complete them.

Define a variable

A placeholder must be inserted. Insert => Fields => Other fields

	<0.LAB.NA	ME>¶		
É	Éditer les champs		×	ł
	<u>Туре</u>	F <u>o</u> rmat	S <u>u</u> bstituant	F
	Substituant	Texte Table	o.lab.name	
F		Cadre Image	Annotation	
DF		Objet	I	
< B			<u>M</u> acro	ł
<u>₩Е</u>				Ļ
AE BE				ŀ
iC.				ł
				1
I				t
1				t
A				Ξ
a	▲ É <u>d</u> iter			ł
	Aide		<u>O</u> K <u>A</u> nnuler	

The syntax in the "Substitute" field is of the form : o.category_name.data_name.

(see list of data available at the end of the document).

You can then change the font style to your liking.

Define a logical test

IF test

Via a substitute: Insert => Fields => Other fields.

In the example the full substituent is: if test="o.report.full_comm == 'Y' and o.rec.comm".

<if <="" test="O.REPOR" th=""><th>T.FULL_COMM ·== · 'Y' · AND ·</th><th>D.REC.COMM"></th></if>	T.FULL_COMM ·== · 'Y' · AND ·	D.REC.COMM">
Éditer les champs		×
<u>T</u> ype	F <u>o</u> rmat	S <u>u</u> bstituant
Substituant	Texte	if test="o.report.full_comm =
	Cadre	<u>Annotation</u>
	Image	
	Objet	
		<u>M</u> acro

Any test must be closed by its equivalent with the following syntax.

Éditer les champs		×
<u>Т</u> уре	F <u>o</u> rmat	S <u>u</u> bstituant
Substituant	Texte Table Cadre Image Objet	/if <u>A</u> nnotation

Test CHOOSE

Via a hyperlink: Insert => Hyperlink.

for each="res in data.l_res"			
<u><reslabel></reslabel></u> ¶	<u>choose</u> [] when bold_value <u>CRES.VAI</u> <u>TEST="RES.UNIT"> S</u> <u>Awhen</u> [] otherwise[] <u>CRES.VAI</u> <u>TEST="RES.UNIT"> S</u> <u>/otherwise</u> [] <u>/choose</u> []	<pre><res.references>¶</res.references></pre>	< <u>RES.PREV_DATE></u> <u>SRES.PREV_VAL> <u>TEST="RES.UNT"></u> <u><res.prev_unt></res.prev_unt></u></u>

The principle is to choose between 2 or more cases.

Here we want to put in bold when bold value equals Y and in normal font when it is not equal to Y.

Define a hyperlink opening CHOOSE followed by one (or more) hyperlink WHEN then /WHEN and then OTHERWISE and /OTHERWISE and finally conclude with /CHOOSE.

Hyperlinks must follow the following syntax in the URL field: relatorio://...

Note: the *Text* part can be filled in as you wish, only the *URL* part must follow the requested syntax.

choose	<res.ref< th=""><th>ERENCES></th><th><res.prev_date></res.prev_date></th><th></th></res.ref<>	ERENCES>	<res.prev_date></res.prev_date>	
Hyperlien				\times
Internet	Type d'hyperlien Proto <u>c</u> ole : <u>U</u> RL : Te <u>x</u> te :	● <u>W</u> eb C relatorio://c choose) <u>F</u> TP :hoose test=""	~

choose¶ when bold_value	<u>=='Y'</u> ¶	RENCES	<res.prev_date> <res.prev_val><th></th></res.prev_val></res.prev_date>	
Hyperlien				\times
Internet	Type d'hyperlien Proto <u>c</u> ole : <u>U</u> RL : Te <u>x</u> te :	● <u>W</u> eb ○ <u>F</u> relatorio://wh when bold_va	TP en test="res.bold_value == lue =='Y'	

FOR loop

Via a hyperlink: Insert => Hyperlink.

In order to repeat a paragraph or line with a data set (like o.l_data and o.l_data.l_res).

<oli>C.LABEL.ANALYZES></oli>	 C.LABEL.RESULTS> 	 LABEL.REFERENCE S>¶ 	<o.label.previous></o.label.previous>			
for each="data in o.l_data"¶						
<if-test="data.fam_name"></if-test="data.fam_name">						
<data.fam name=""></data.fam>						

Open the FOR with a hyperlink

for·each="data·i	<u>n∙o.l_data"¶</u>		
Hyperlien			\times
Internet	Type d'hyperlien Proto <u>c</u> ole : <u>U</u> RL : Te <u>x</u> te :	● <u>W</u> eb ○ <u>F</u> TP relatorio://for each="data in o.l_data" for each="data in o.l_data"	~

Close the FOR with a hyperlink

/for¶			
¶ Hyperlien			×
	Type d'hyperlier Proto <u>c</u> ole :	● <u>W</u> eb ○ <u>F</u> TP	
Internet	<u>U</u> RL :	relatorio:///for	\sim
•	Te <u>x</u> te :	/for	
Committee			

Define a frame for an image

Insert => Frame

The syntax to follow in the Options tab and then Name fields is as follows: image : *o.category.data_name*

RI.	Cadre	×
	Type Options Adapter	Hyperlien Bordures Zone Transparence Colonnes Macro
	Noms	
	<u>N</u> om :	image: o.logo
		logo set in LabBook
if-n	Description :	
COC		
<u>if-b</u> <0	Lion précédent :	
if-h hos	Lien precedent :	<accur></accur>
hos	Lien <u>s</u> uivant :	<aucun></aucun>
pre	Protéger	Alignement du contenu
<u>if-re</u>	Contenu	Alignement <u>v</u> ertical Haut \vee
<0	Taille	
	Propriétés	
<if< td=""><td>É<u>d</u>itable dans le d</td><td>ocument en lecture seule</td></if<>	É <u>d</u> itable dans le d	ocument en lecture seule
<0	Imprimer	
1	Direction du texte :	Utiliser les paramètres de l'objet supérieur
<td></td> <td></td>		
<u>fo</u> ı		
	A:-I-	Détricientes OK Assults
	Alde	<u>K</u> einitialiser <u>U</u> K <u>A</u> nnuler

To replicate an image multiple times on the same template, you need to adapt the simple syntax mentioned above by making the end number unique in your template for each image.

Cadre		\times
Type Options Adapter	Hyperlien Bordures Zone Transparence Colonnes Macro	
Noms		
<u>N</u> om :	image: (o.img.code39, 'image/png', None, None, 2)	
	*	

Define a QR code template

QRC templates are used to generate an image as a QR code.

The latter can be inserted in a result template (see: Defining a frame for an image).

Only one QR code can be inserted in a result template.

This generation is triggered by the setting of an analysis variable in the repository (Example analysis B4274).

The QR code template is in TOML format

Example provided by default:

```
# -*- coding:utf-8 -*-
version = 1
[QRcode]
# Integer from 1 to 40 that controls the size of the QR Code (the smallest,
version 1, is a 21x21 matrix)
# Set to 0 and use the fit parameter when making the code to determine this
automatically.
version = 0
# Options : L, M, Q ,H (respectively 7%, 15%, 25%, 30% or less errors can be
corrected)
error correction = "H"
# Dynamic value options :
# {{ o.rec.rec_date }}, {{ o.rec.num_y }}, {{ o.rec.num_m }}, {{ o.rec.num_d }}
# {{ o.pat.lastname }}, {{ o.pat.firstname }}, {{ pat.maidenname }}, {{
o.pat.middlename }},
# {{ o.pat.code lab }}, {{ o.pat.code }}, {{ o.pat.sex }}, {{ o.pat.age }}, {{
o.pat.age unit }}
# {{ o.res.value }}, {{ o.res.unit }}, {{ o.res.valid date }}
text = "{{ o.pat.lastname }} {{ o.pat.firstname }} {{ o.pat.code lab }} , {{
o.pat.sex }} , {{ o.pat.age }} {{ o.pat.age unit }} , {{ o.res.valid date }} ,
{{ o.res.value }}"
```
